

WHAT IS CLAIMED IS:

1. A sand-belt finishing machine, comprising a main frame, and two grinding devices, wherein:

the main frame is substantially L-shaped and includes a longitudinal portion and a transverse portion; and

each of the two grinding devices has a first end rested on a first side of the longitudinal portion of the main frame, and a second end formed with a free end.

2. The sand-belt finishing machine in accordance with claim 1, wherein the longitudinal portion and the transverse portion of the main frame form an opened space.

3. The sand-belt finishing machine in accordance with claim 2, wherein the two grinding devices are located in the opened space formed by the longitudinal portion and the transverse portion of the main frame.

4. The sand-belt finishing machine in accordance with claim 1, wherein the longitudinal portion of the main frame is connected with the transverse portion of the main frame.

5. The sand-belt finishing machine in accordance with claim 1, further comprising a driving device mounted on a second side of the longitudinal portion of the main frame for driving the two grinding devices.

6. The sand-belt finishing machine in accordance with claim 1, further comprising a lift device mounted on the transverse portion of the main

- 1 frame, and includes a lift platform that is movable relative to the two grinding
- 2 devices.
